QUICK SETUP

STEP 01

Connect AC power adapter to rear power jack , then connect power adapter to wall outlet.

STEP 03

Connect headphones to the front headphone output jack.

STEP 05

Slowly raise the volume knob to an appropriate listening level.

See listening tips on page 5

STEP 02

Connect a cable from your audio player to the RCA or 3.5mm Input jack. Press the front INPUT button to select 3.5mm input, or depress to select RCA.

STEP 04

Turn the volume knob clockwise to power on.

CONFIGURATION

CONNECTIVITY

ATOM AMP provides two inputs. Press the INPUT button to select 3.5mm, or depress for RCA.

RCA Preamp Outputs are only active while headphones are unplugged. Set the GAIN button to low gain (depressed) when using RCA output. The volume knob adjusts RCA output.

Maximum RCA Analog Input Level (High Gain):	2.10 VRMS (+8.6 dBu)
Maximum RCA Analog Input Level (Low Gain):	8.65 VRMS (+20.1 dBu)

SETTING GAIN

Press the gain button to toggle between low or high gain amplification. Always use the lowest gain necessary.

Switch to high gain only when you're unable to achieve desired listening volume at low gain.

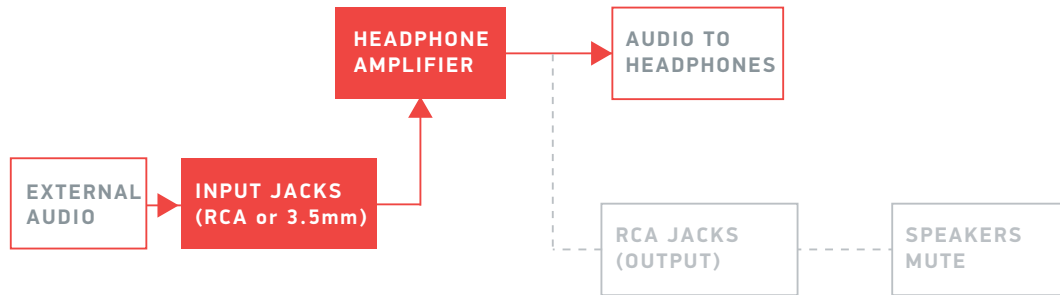

SOURCE SAFETY

Atom Amp is DC coupled for maximum signal quality and requires an input source with $< 4.5\text{mV}$ of DC offset for safe operation. All JDS Labs DACs and consumer audio sources are safe to use.

If you experience warm headphones, a loud pop when changing gain, or severe rustling sounds while adjusting volume, immediately power off and contact the manufacturer of your audio source to ensure DC offset is below 4mV.

PREAMP-OUTPUT FUNCTIONALITY

HEADPHONES CONNECTED

HEADPHONES DISCONNECTED

The volume knob adjusts RCA preamp output. Use Low Gain. Be sure to reduce volume level before connecting headphones!

LISTENING TIPS

Listen safely to conserve your hearing:
www.hearingloss.org

To ensure an optimal noise floor,
always position audio equipment as far
away as possible from wireless devices.

OPERATING CARE

Atom Amp uses a high current, linear
power supply design and runs warm
to the touch.

Atom Amp can be safely powered on
24/7.

Do not turn knob beyond its limits or
press buttons with excessive force.

Use gentle force when inserting or
removing cables.

TROUBLESHOOTING

Amplifier does not turn on

Cause: Disconnected, damaged, or incorrect power adapter

Solution: Please ensure AC adapter is firmly connected to power jack and wall outlet

Amplifier does not turn off (light remains on)

Cause: On rare occasion, mechanical relays can stick. Most common after shipment.

Solution: Firmly knock top left corner of enclosure, near power jack, to disengage

No sound, but light is on

Cause: Wrong input mode selected, or cable/source problem.

Solution: Input button must be depressed for RCA input, or pressed for 3.5mm input.

Audio plays in only one channel

Cause: Bad cable or adapter, or incorrect source setup

Solution: Try another input cable, and headphones with a native 1/4" connector.
